SUMMARY

DevOps-oriented engineer with hands-on experience provisioning Linux-based private cloud infrastructure, containerizing production workloads with Docker, and deploying web services behind Nginx reverse proxies at VIA Technologies. Skilled in writing CI/CD automation scripts, configuring VM networking, and managing remote servers via SSH. B.S. in Computer Science from National Taiwan Normal University; seeking a full-time DevOps or Site Reliability Engineering role.

EXPERIENCE

Infrastructure & DevOps Engineer Intern

VIA Technologies, Inc. — IT Application Team, Taipei | *Jun 2025 ~ Jan 2026*

- Provisioned and configured **Linux virtual machines** on the company's private cloud, establishing network routing, firewall rules, and DNS records to host an internal enterprise platform serving 50+ users.
- Authored **Docker Compose** manifests and custom **Shell scripts** to automate build, test, and deployment pipelines, reducing release cycle time from manual half-day processes to under 15 minutes.
- Configured **Nginx** as a reverse proxy and static file server, implementing SSL termination, gzip compression, and caching policies to ensure high-availability frontend delivery.
- Managed remote server administration via **SSH**, performing routine maintenance including log rotation, disk monitoring, package updates, and security patching across multiple VM instances.
- Coordinated with MIS and senior DevOps engineers to request server resources, open network ports, and establish VPN tunnels, documenting all infrastructure changes in internal runbooks.
- Developed automation scripts to streamline repetitive data-entry workflows, ensuring data integrity and consistency across the internal business operations platform.

PROJECTS

CPBL Baseball Stats Platform — Multi-Container Deployment

github.com/Dannygod/baseball_stats, *May 2025*

- Orchestrated a **3-service Docker Compose** stack (Next.js frontend, Flask API, MySQL database), ensuring dev/prod environment parity and eliminating "works on my machine" issues for a 3-person team.
- Configured inter-container networking, persistent volumes for database storage, and health checks to enable reliable local development and one-command deployment.
- Deployed the production frontend to **Vercel** and backend services to **Zeabur**, managing environment variables, build configs, and domain routing via **Cloudflare** DNS.

Taipei Fall Coding Festival Hackathon

Dept. of Information Technology, Taipei City Government, Taipei *Nov 2025*

- **Top 15 / 80 teams** — advanced to the final round in a 24-hour hackathon.
- Containerized the full development environment with **Docker**, enabling 5 team members to spin up identical local stacks within minutes and iterate rapidly under time pressure.
- Integrated 3 government open-data APIs (cooling shelters, AED locations, real-time AQI) into a unified backend service, designing fault-tolerant API calls with retry logic and caching.

EDUCATION

Bachelor of Science in Computer Science and Information Engineering

National Taiwan Normal University (NTNU), Taipei *Sep 2022 ~ Jul 2026*

- Relevant Coursework: Operating Systems, Computer Networks, Systems Programming, Database Theory, Data Structures & Algorithms, Computer Organization & Architecture.

SKILLS

Infrastructure & DevOps: Docker, Docker Compose, Nginx, CI/CD Automation, Shell Scripting (Bash), SSH, Linux/Unix Administration

Networking: TCP/IP, DNS, HTTP/HTTPS, Firewall Configuration, VPN, Reverse Proxy

Cloud & Platforms: Vercel, Zeabur, Cloudflare, Private Cloud / VM Provisioning

Programming: Python, Bash, JavaScript/TypeScript, C/C++, Java

Tooling: Git, GitHub, n8n (Workflow Automation)

Languages: Mandarin Chinese (Native), English (TOEIC 765)
